The IEC Academy is pleased to invite you to two upcoming webinars:

IEC Guide for Energy Flexibility in the All-Electric and Connected Society (AECS)

Dates and time:

20 July 2026 at 🕒 06:30 - 08:00 UTC

20 July 2026 at 🕒 12:30 - 14:00 UTC

[Register here >](#)

As the global energy transition accelerates through decarbonization, electrification, and digitalization, energy flexibility is becoming essential to ensuring reliable, resilient, and efficient energy systems. This webinar will explore the role of energy flexibility in supporting the vision of an All-Electric and Connected Society (AECS), where electricity, digital technologies, and interoperable systems work seamlessly across sectors to enable a more sustainable and interconnected energy future.

The webinar will introduce the new IEC Guide for Energy Flexibility, currently under development, together with the newly launched Open Forum initiative. Participants will gain insights into the guide's scope, objectives, and the opportunities for stakeholder engagement through discussion and feedback.

To accommodate different schedules and time zones, **the webinar will be offered twice**. Both sessions will cover the same content, including an overview of the IEC Guide and its key elements, followed by a short Q&A session. Participants are welcome to register for the session that is most convenient for them.

[Learn more about the session by visiting our webinar page.](#)

 Can not attend live? Please register to receive the recording by email after the webinar.

We look forward to your participation.

With kind regards
IEC Academy & Capacity Building
